well , hi Hossein :
first download the **phpmyadmin** from here :
https://www.phpmyadmin.net/downloads/

then extract the downloaded (rar,zip) to :
{INSTILLATION_PATH }\laragon\etc\apps
rename the folder to **phpmyadmin** .

now go to http://localhost/phpmyadmin

and your there 😀 .

if you want to login to the **phpmyadmin** you need to search in the **phpmyadmin** folder for a file called *config.sample.inc* and duplicate it and rename it to *config.inc* open the file and search for :
$cfg['Servers'][$i]['AllowNoPassword'] = false;
and set it to true : *$cfg['Servers'][$i]['AllowNoPassword'] = true;*
save the file and DONE you can login using username of : root
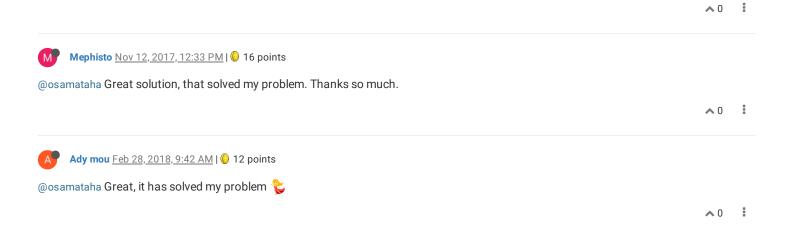

regards OSAMA TAHA.
